

the 1990s, the number of people in the world who are undernourished has increased from 600 million to 800 million (FAO 2001).

There are a number of reasons why the world's population is becoming more undernourished. First, the world's population is growing rapidly, and the number of mouths to feed is increasing. Second, the world's population is becoming more urbanized, and the demand for food is increasing. Third, the world's population is becoming more affluent, and the demand for food is increasing. Fourth, the world's population is becoming more mobile, and the demand for food is increasing.

There are a number of ways in which the world's population can be fed. First, the world's population can be fed by increasing the production of food. Second, the world's population can be fed by increasing the efficiency of food production. Third, the world's population can be fed by increasing the distribution of food. Fourth, the world's population can be fed by increasing the consumption of food.
